**Letter of Recommendation for Ms. Deepanjana Majumdar**

I have known Deepanjana Majumdar (born 11.07.1985) for more than two years in my capacity as a professor in the Master Programme Geomatics (MSc) at the University of Applied Sciences in Karlsruhe.

Ms. Majumdar took several lectures (GIS Project, Databases, Facility Management, and Statistics & Adjustment) during her studies from me and earned superior grades in those classes. She worked under my supervision on her Master's thesis – *A Study of Seasonal Patterns of Birth for Velke Pole / Slovakia between 1781 and 1900*.

During her studies from October of 2013 through January 2016 Ms. Majumdar worked several times as student assistant for me in WebGIS programming (autumn 2014 and autumn 2015), supporting an international workshop (November 2015), and preparing a student's project in multivariate regression (January 2016).

Ms. Majumdar has a rare blend of top research, analytical, and interpersonal skills. I was quite impressed by her ability to complete all work assigned to her in a perfect manner and on time. At least with the master's thesis she shows her very good scientific abilities.

I am pleased to say that Ms. Majumdar is a team player, and a kind and cooperative individual.

Her interpersonal skills were remarkable. She is respected by the department as well as her fellow students for her friendly, unbiased, and open-minded character. Her behaviour has always reflected integrity.

Ms. Majumdar's consistently friendly manner, her sense of fair play and her maturity have made it interesting and pleasant to work with her.

Deepanjana Majumdar is a very good student; she belonged always to top 10% in each of my examinations.

Professor Dr.-Ing. Heinz Saler
